

**Title: Groundwater Systems and Microbial Risk:
 The Regulatory Approach**

Target Audience: Public water systems, contract operators, and other drinking water professionals using groundwater who want guidance and assistance on groundwater specific regulations.

Agenda:

- Microbial risks and groundwater wells
- In-depth information and guidance on the new (effective late Fall 2010) minimum groundwater disinfection requirements including:
 - Entry-point chlorine residual
 - Distribution systems chlorine residual
- Information on the federal Groundwater Rule (effective December 1, 2009):
 - Triggered source water monitoring
 - Corrective action
 - 4 log treatment for viruses and compliance monitoring
- Additional information provided on :
 - Disinfection waivers
 - Hand-pumped wells

Join Armando Herald and Julie Conroy, CDPHE specialists in regulatory implementation, to learn what it takes for groundwater systems to comply with the most recent groundwater specific regulations.

This training is free!
Drinking Water Operator TUs will be awarded!
